

John Jones & Stephe Jennings
The United States Department of Energy (DOE)

9/26/2011
(Via Electronic Mail)

On September 20th of 2011 DOE sent out "DOE-NEWS" that reads...

As you know there are still several structures remaining in Area IV that need to be removed. Prior to demolishing structures three plans are needed:

- Building Sampling Plan for radionuclide characterization
- Standard Operating Procedures
- Detailed Facility/Building Plan

The first two plans have been completed and are attached to this email for your review, and will be up on our website next week.

The Building Survey Plan describes radiological characterization necessary to determine residual building contamination for planning of demolition and protection of workers and the public. The Standard Operating Procedures describes the master plan process for building demolition. Next, it provides references for regulations and standard procedures for Area IV D&D. Lastly, it provides general approach for waste disposition, demolition and documentation.

If you have any questions, concerns, or comments, please feel free to email the address below or call Stephe (818)466-8162 or John (818)466-8959.

Please explain how this preemptive measure will not violate the Judge Conti order and please provide information on your dealings with trying to overturn the Conti order for removal.
