

With over 1700 acres of the 2850 acre SSFL draining into Bell Creek (Headwaters of the Los Angeles River) via surface water run-off, there are some concerns of how far and what constituents have migrated. Groundwater contamination has been found in the monitoring well WS-9A that services this area. The department needs to install more groundwater monitoring wells in and around the Bell Creek drainage prior to proposed recreation of the Los Angeles River Headwaters.

Thank you in advance for the consideration of these comments. The Community looks forward to a continuing relationship with EPA to Ensure a Proper Cleanup of the Santa Susana Field Laboratory, it's Related Facilities and their Surrounding Communities.
