

DAYTON CANYON / CENTEX HOMES

**" NO FURTHER ACTION "
 IS THE WRONG DECISION
 FOR THIS COMMUNITY**

DTSC has been asked by the developer to find a "No Further Action" decision which would allow them to move forward on grading the property for the planned 155 homes to be built in the fall. This is after finding staggering amounts of perchlorate in the creekbed. A "Time-critical Removal Action" was planned by DTSC when a large rain event (2006) washed the perchlorate downstream and off the property. NO further sampling to confirm that more isn't entering the site from stormwater runoff from the Santa Susana Field Lab where a "Stormwater Expert Panel" has been hired to mitigate the ongoing problem. You can't pretend you don't know where the problem is coming from, when you've hired experts to design and build ENTS Engineered Natural Treatment Systems to prevent the contaminated water from running off the site into the neighboring communities. Knowing that we have a problem that is not yet been fully researched and dealt with, we cannot accept a "No Further Action" determination from the State, that will put more people in harms way, in addition to possibly re-exposing existing residents to the dangerous contaminants during the grading and building process.
