## cleanuprocketdyne.org

Environmental Advocacy for the proper clean-up of the Santa Susana Field Laboratory (SSFL) currently owned by Boeing, and other legacy sites leaving contamination for future generations to deal with. Senate Bill 990 (Kuehl/Brownley) and recent commitments by the State of California in a historic letter of intent written between the state and the people, offer new hope in a clean-up battle that has lasted for decades.

ACME and cleanuprocketdyne.org have joined to provide a place for people to meet and discuss the challenges of today's site characterization and clean-up under the RCRA (Resource Conservation Recovery Act) Facility Investigation and clean-up scheduled for completion in 2017.

We feel that this process must be watched every step of the way, as the community has been waiting for decades for real action to take place. With SB990 and Assembly Member Smyth's AB 1846 to establish over-

sight over the creation of a state park based on Boeing's commitment to donate the property to open-space when the Governor signed the bill (SB990). This important bi-partisan effort needs the support of the surrounding communities so our voice is heard.

This Museum/Gallery will serve as a meeting space and will be used to provide thought-provoking discussion in reviewing the options for clean-up and remediation of the site, as well as its' affect on the surrounding communities. The people who will live with the decisions made during the clean-up process, should be part of that process. That's what we hope to create here in our new Chatsworth Museum.

Housing Developments on

both sides of the lab are under consideration today at Dayton Canyon (Centex Homes at Roscoe and Valley Circle Blvd's) and Runkle Canyon on the Simi Valley side, closest to Area IV where most of the nuclear work was conducted. DTSC entered into a CLRRRA Agreement (California's Land Reuse and Revitalization Act) on April 23, 2008 with Runkle Canyon, LLC., regarding assessment and possible remediation of the site releases of hazardous substances that may have come from SSFL.

23350 Lake Manor Drive, Chatsworth 91311 818.712.6903

Through imagery and thought-provoking discussion, we can raise awareness so the mistakes of our past do not continue to threaten our future.

### July 27th MOVIE NIGHT at ACME 6pm

Join us at ACME for MOVIE NIGHT. We will screen the 1979 Jane Fonda, Michael Douglas film THE CHINA SYNDROME Doors Open at 6 and the film will start at dusk. This film is based on the SRE or Sodium Reactor Experiment at the Santa Susana Field Labo-

ratory in 1959. In 2006 researchers concluded that the SRE may have released 240 Times the Radiation Release of Three Mile Island.

### Upcoming Meetings:

July 15th SSFL Sierra Club San Fernando/Reseda 7:30pm

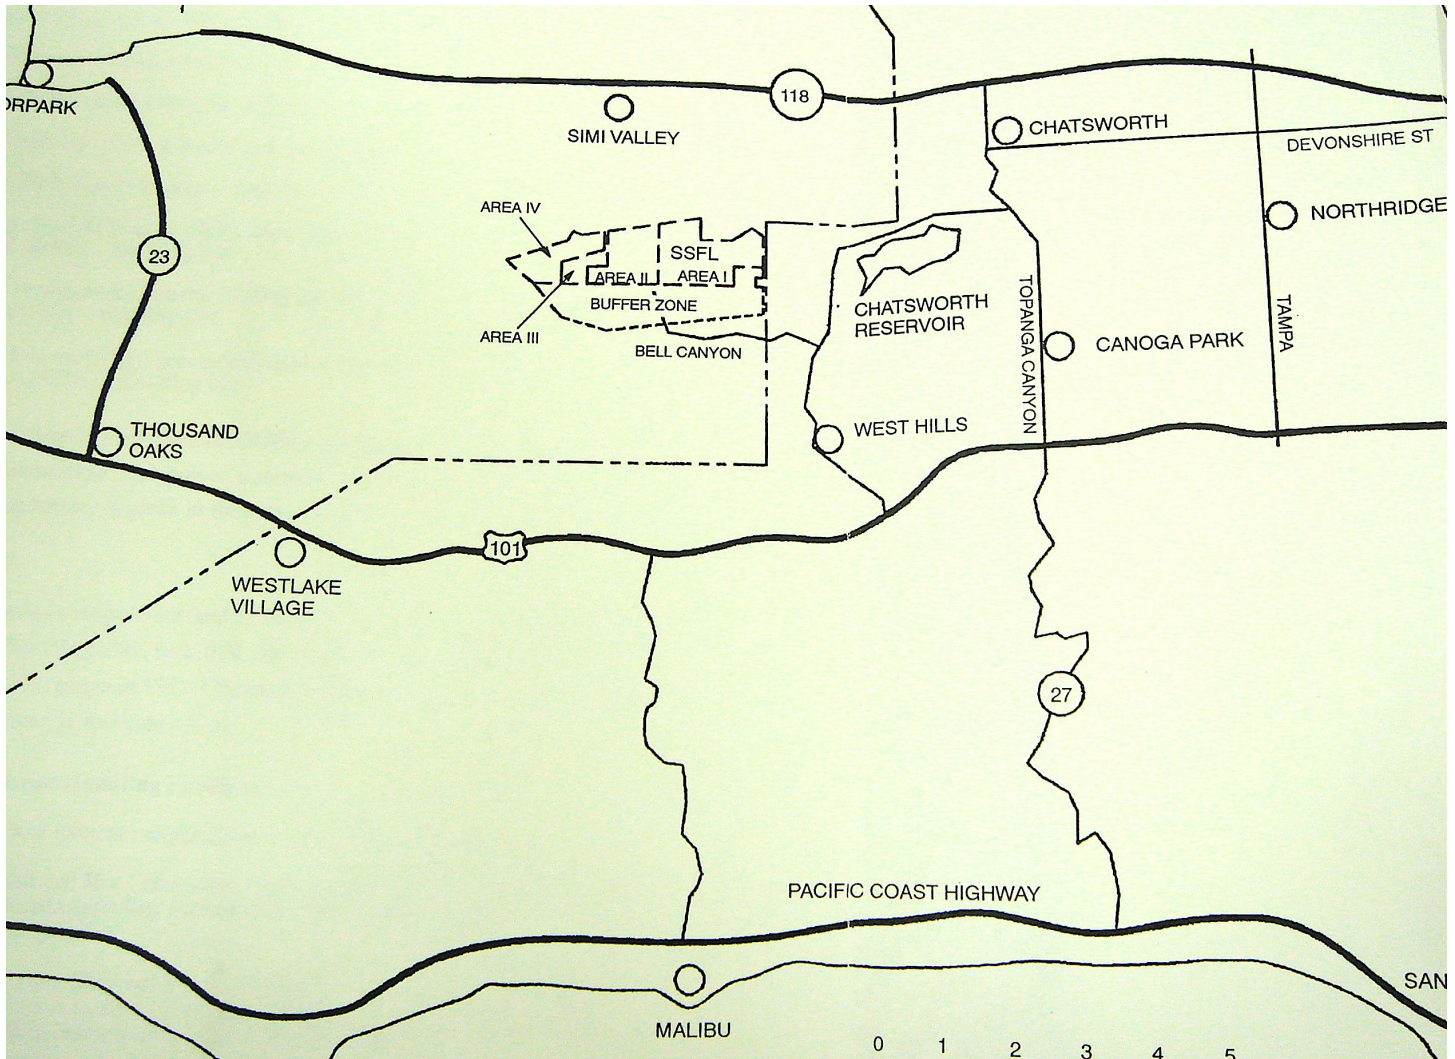

DOE EIS Meetings

Scoping Meetings 7/22,23,24  
Simi Valley, Northridge and Sacramento

Save the date:  
Stormwater Expert Panel July 17

# Headwaters to the LA River:

The above photos shows the Santa Susana Field Laboratory as the headwaters to the LA River, Malibu Creek Watershed. It is our goal to understand the drainage and how the lab's contaminants have effected the local wildlife habitats as well as neighboring communities all around the site.

Following SB990, Assembly Member Julia Brownley authored AB2733 (Brownley also co-authored SB990) to bring forth new legislation as a direct result of the lack of warning that SSFL neighbors had of the risks they had unknowingly assumed because of the toxics that were leaving the site.

Check online at: <http://www.cleanuprocketdyne.org> for updates and additional "pre and

post" meetings at ACME to help arm the public with the facts and the important comments related to each of these issues regarding the cleanup of the Santa Susana Field Lab.

**Make an appointment:** 818.712.6903

We are here at the museum most days, with the exception of meeting and hearing days. If you are interested in a particular issue, call and make an appointment and we will do our best to put out

the appropriate documents and photographs.

The Aerospace Cancer Museum of Education is made possible by a generous grant from the Annenberg Foundation, showing their ongoing dedication to Environmental Advocacy and Awareness.
